NEXUS

FOR TPAS & HEALTH PLANS

PRIZM NEXUS: CREATION, HOSTING, MAINTENANCE & COMPLIANCE

Complete TiC File Coverage, *Attestation Support Included.*

PRIZM Nexus has two parts. The TiC Compliance Package covers the files and attestation support for all self-funded groups of a TPA & Health Plan. White-glove Custom File Creation builds the in-network files for direct contracts, domestic networks, and carve-outs that have none today.

NEW TIC RULE APPLIES

March 6, 2027

Attestation required on in-network and out-of-network files

WHAT CHANGED

Starting March 6, 2027, in-network and out-of-network files must be attested as true, accurate, and complete, with a senior official named. The plan stays liable, and penalties of up to $100 per affected member per day still apply.

HOW PRICING WORKS

PRIZM Nexus combines the TiC Compliance Package, at one PEPM fee across all self-funded groups, with Custom File Creation, at a one-time fee plus monthly maintenance per network. Offer custom files separately or in an admin fee.

WHAT WHITE-GLOVE MEANS

Deerhold learns your plan design strategy first. Files are built and maintained around that strategy, and every question about what is posted gets a direct answer.

TiC Compliance Package

ONE PEPM FEE

Covers the following for all self-funded groups of a TPA & Health Plan.

- Branded website for hosting MRFs
- Out-of-Network (Allowed Amount) file
- Text file
- Ongoing compliance with regulatory changes
- Table of Contents file
- Taxonomy file (if required)
- Attestation support

Every file is checked for missing billing codes, providers, and lines of service. Each file ships with a dated quality and source report your designated official can review before signing, under the Deerhold or your own brand.

Custom File Creation

PRICED PER NETWORK

For your or your groups' direct contracts, domestic networks, or carve-outs that do not have MRF files today. One file per network. Plan sponsors are directly responsible for attesting to these group-specific files.

- In-Network file
- Hosting fees included
- Utilization file

If 40 direct contracts are bundled into a single network offering, the customer is charged for one file. Customers may pass custom file fees through to their plan sponsors.

KEY DATES

Apr 2027	Expected first posting of files with attestation required. Postings move to quarterly.
Oct 2027	Taxonomy and Text files required.
Jul 2028	First annual Utilization file posts.

CUSTOM FILES AND THE PACKAGE

Table of Contents integration and attestation support for custom files are included at no additional cost for TiC Compliance Package customers.

A self-insured health system that runs its own hospital as a domestic tier still needs its own file, because hospital price transparency files do not satisfy the plan's requirement.

GOOD FILES, BETTER SHOPPING

Compliance aside, many member shopping tools draw on these files. Accurate MRFs steer members to your domestic tiers and direct contracts.

Start with a Compliance Check-Up. We review what each group has posted today, what your current vendor is doing, and what the new rule will require.

Deerhold provides MRF files, file review, and documentation. The attestation is made by the plan or the administrator it contracts with, and the plan remains responsible for its files. Penalty reference: Internal Revenue Code section 4980D.
